

Bose Corporate HQ Auditorium

Framingham, MA

From fluorescent classroom lighting to permanently installed rock and roll computer automated luminaires this is one tricked-out environment! We helped in the creation of a venue sympathetic to virtually non-stop use for concerts, theatrical presentations, press events, lectures, teleconferencing, and distant learning. In addition to laying out a diverse set of lighting layers, we also developed a sophisticated hybrid theatrical/architectural lighting and control system that met all the various requirements and uses of the room.

This project was awarded a 1998 International Illumination Design Award.
