

MIT Building 7

Cambridge MA

Complete renovation of the main domed portal into the world of MIT. State-of-the-art lighting and control systems were employed to make the lighting environment shift subtly in relation to exterior sky conditions. Complete retrofit and re-conception of all lighting positions and light sources—including the design of new decorative lighting pendants created from existing outmoded ceiling mounted luminaires.

This project was awarded both a 2003 International Illumination Design Award and an International Association of Lighting Designers Radiance Award.
