The Available Light Difference Experience

With a long history of lighting both museum exhibits and theatrical events we were right at home when asked to join the ProQuest design team. Our directive: create a ground-based lighting scheme for the booth that would be at once compelling and functional. Working from the early schematic design process with Client, exhibit designer and fabricator we were able to develop a completely integral lighting system which combines high-end architectural and display lighting fixtures with a theatrical lighting control system. The end result: Booth envy!
